

Script Modification

Here’s what we’re going to cover

- Why you must modify the script and make it your own
- The scientific method of iteration and improvement
- Recording your calls for feedback (where most people slip up)
- Modifying your script & the 2 Step Modification Process
- Writing your expertise statement & pitch
- Building your ‘Answer Vault’
- Version 1.0 and beyond

I
A

Why You Must Modify The Script & Make It Your Own

When you first use our script, it’s going to feel like driving a new car for the first time

I
A

It’s going to feel a little ‘alien’ to you and it probably won’t feel comfortable to use first time around

I
A

So it’s imperative that we make some adjustments to it to suit you, your niche & your offer…

I
A

Why we modify the script

- Out of the box, our script is extremely powerful and can be used to convert high ticket, long term agency & coaching clients. However, it's never going to be a 'one size fits all' script, and we are going to have to make some amendments to it to suit your style of selling.

- When you modify the script, you want to make sure you don't stray away from the core central thesis of it. Don't remove difficult questions because you think they are 'hard to ask' and don't cut out sections because you don't think they are necessary. If there is a question or a section in this script, it's necessary.

- I fell pray to this multiple times a while ago, whereby I would find a proven process and eventually stop asking the hard questions or skip parts of the script because I felt uncomfortable with it. I want you to know that these feelings are totally normal. I deeply regret straying away from the script and if I didn't, I'd be much further ahead than I am now! Your brain has a clever way of avoiding painful things, e.g. asking business owners hard questions or questions that may lead to causing discomfort. Don't let your aversion to pain rule your decisions and STICK TO THE DAMN SCRIPT, MAN!

I
A

The truth is that your script should be a ‘dynamic’ project - it should never be ‘finished’

I
A

You should be seeking constant iteration and improvement, always testing new things, asking new questions and adding to it

I
A

Do not ‘settle’ with what you have…

I
A

The Scientific Method Of Iteration And Improvement

The best way to develop your script is to use the scientific approach

I
A

The scientific approach is simply the art of testing individual variables and assessing the impact they have on the outcome

I
A

The scientific approach is simply the art of testing different individual variables and assessing the impact they have on the outcome

I
A

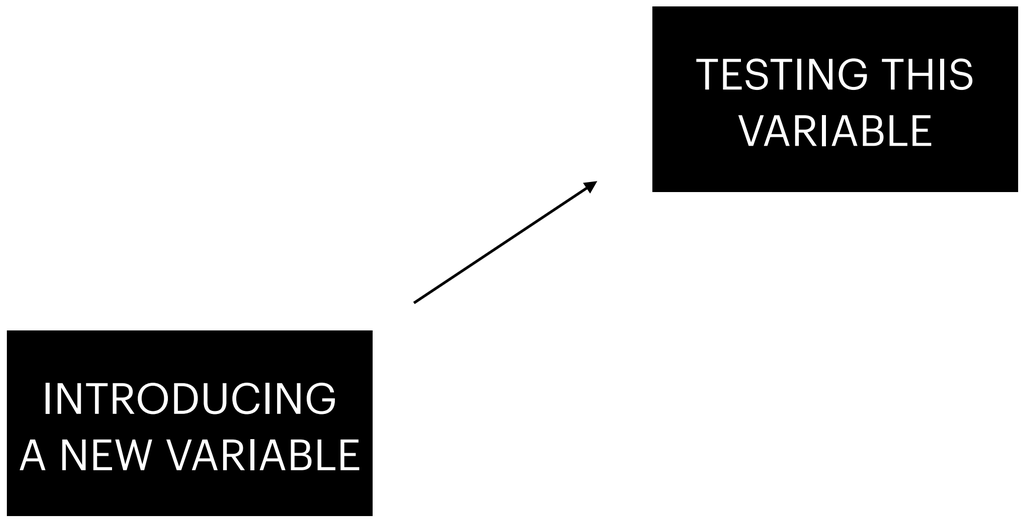

The only thing that stands between you and a insanely high sales conversion rate is enough testing, iteration and improvement

I
A

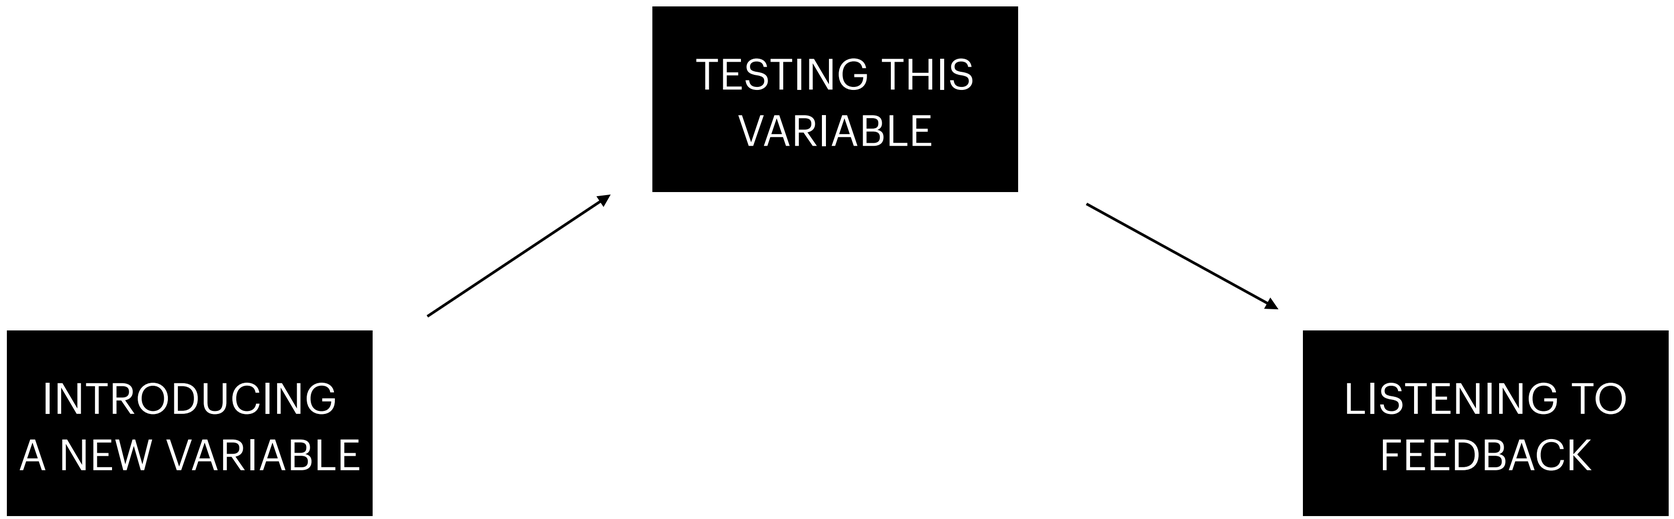

The scientific process works in a cycle...

INTRODUCING
A NEW VARIABLE

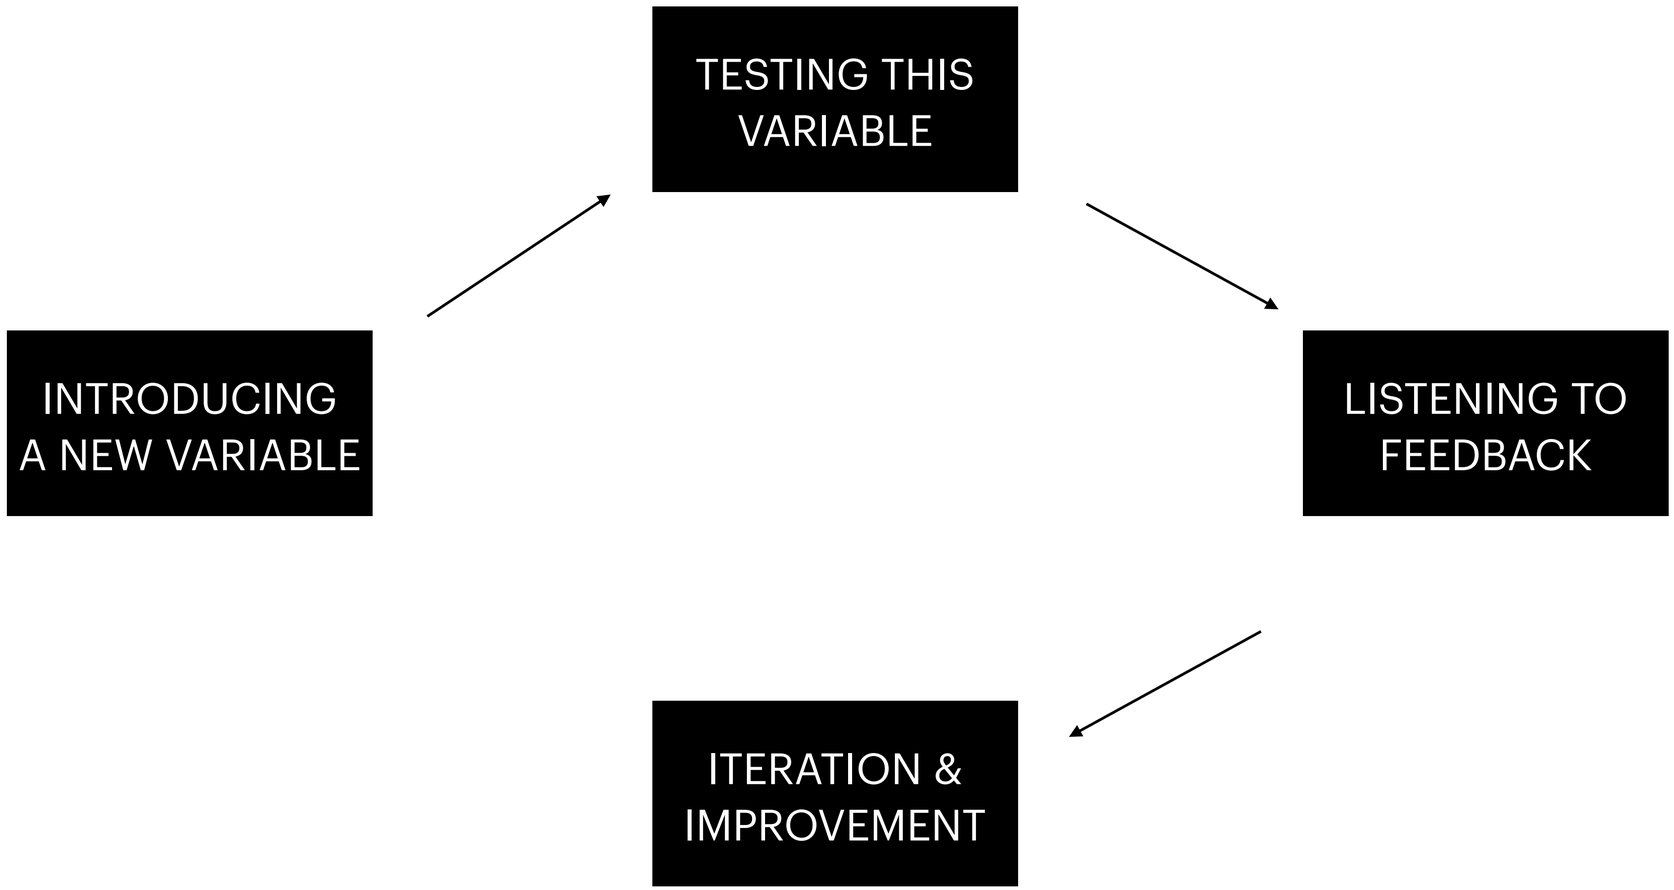

I
A

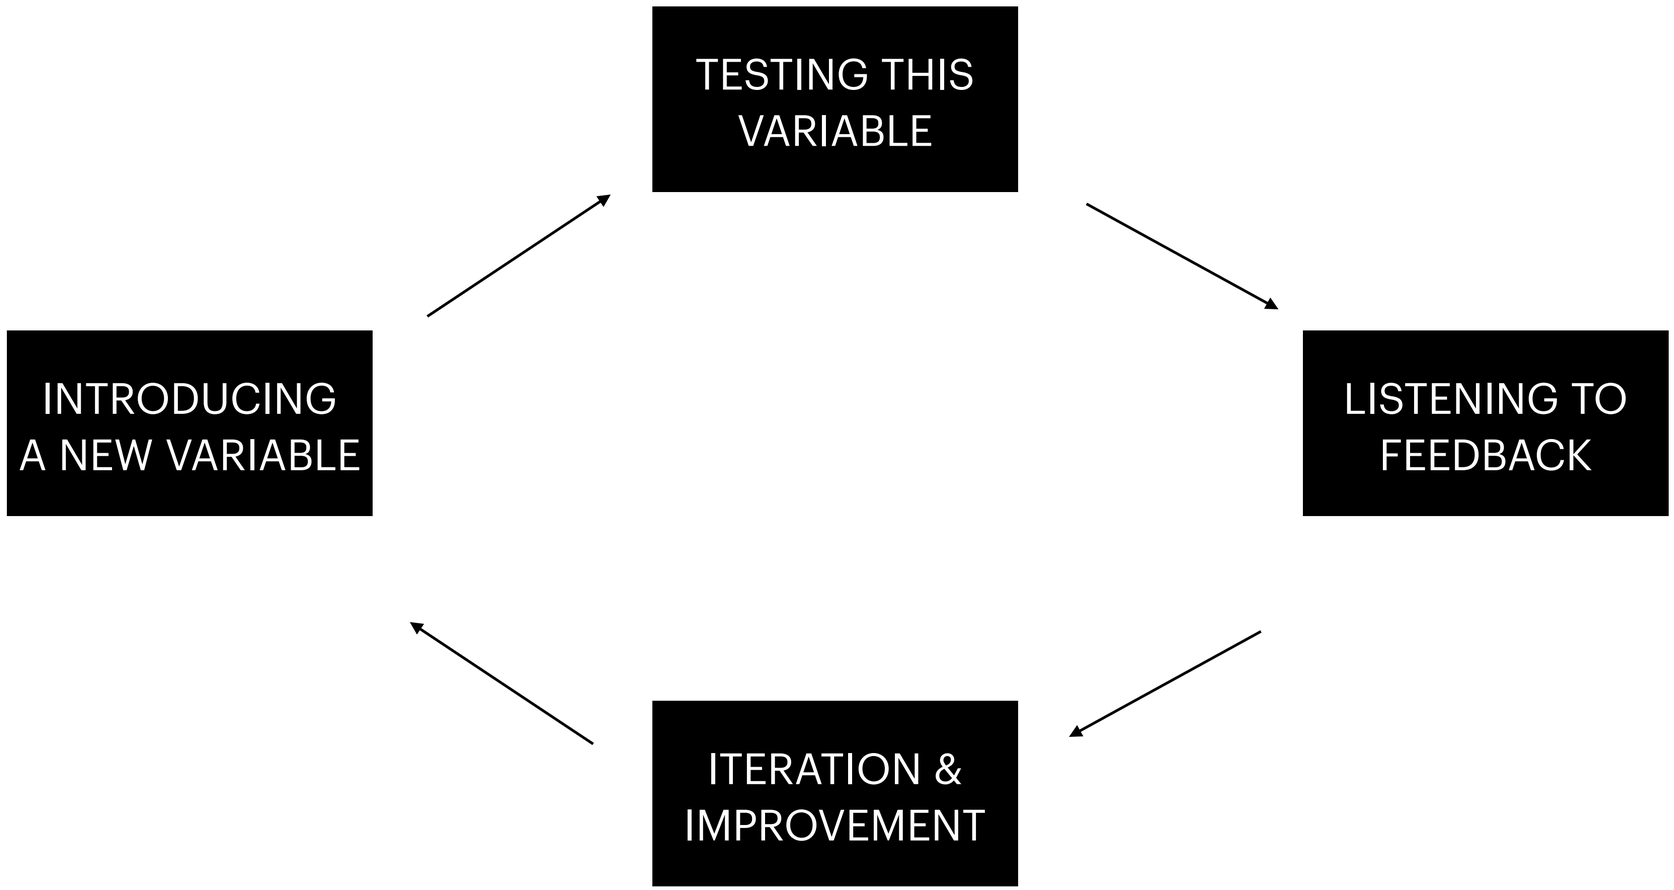

I
A

TESTING THIS VARIABLE
INTRODUCING A NEW VARIABLE
LISTENING TO FEEDBACK

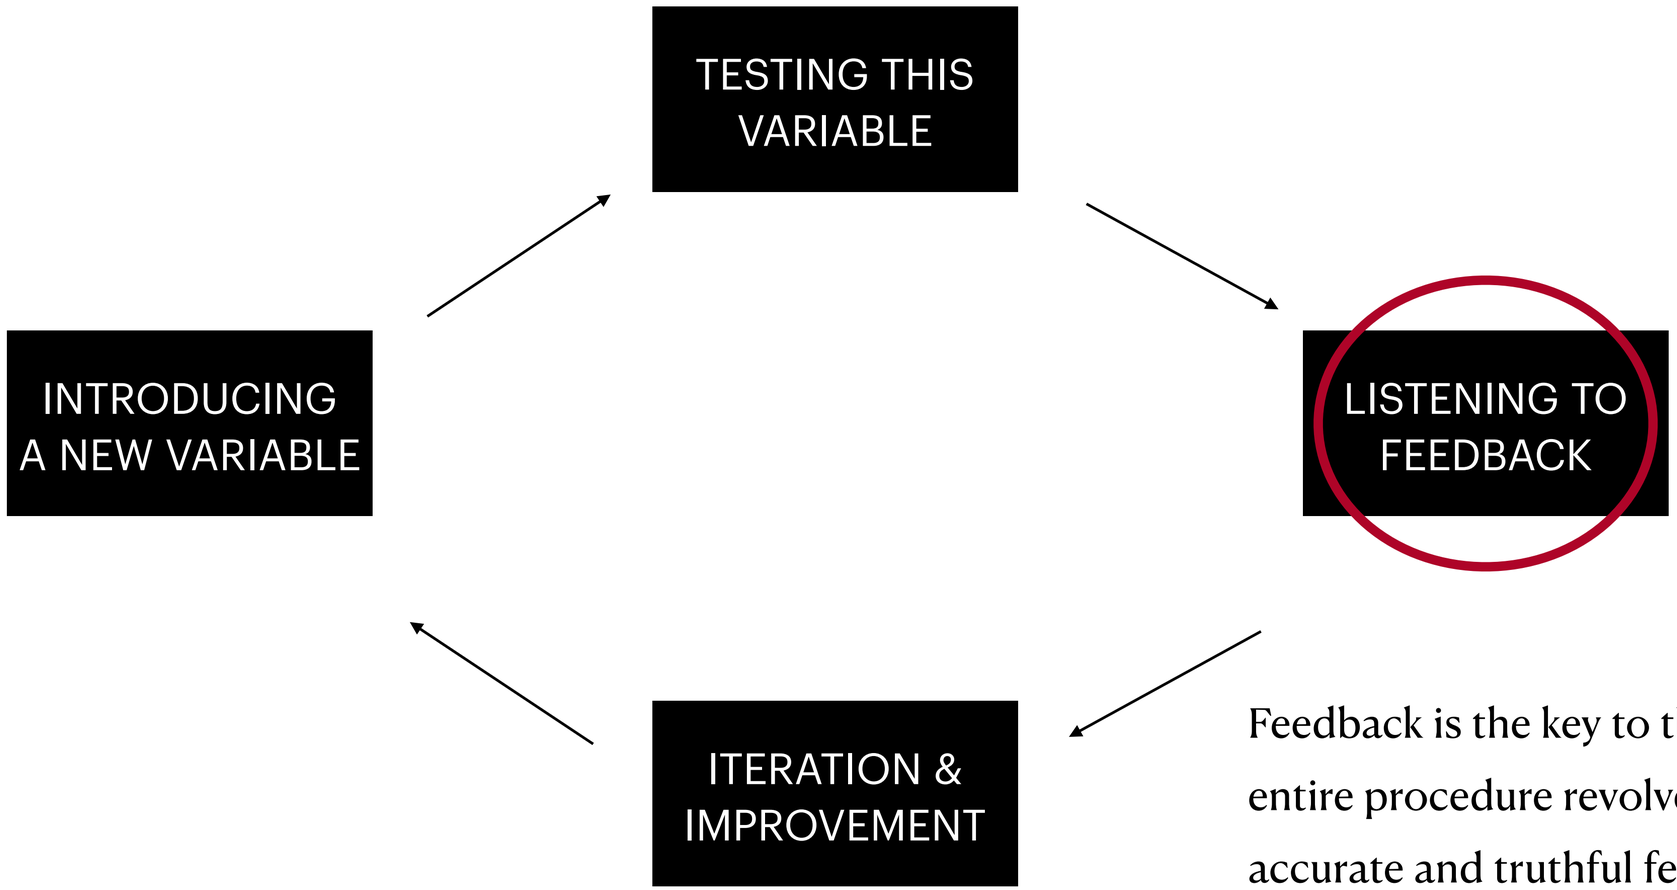

I
A

TESTING THIS VARIABLE
LISTENING TO FEEDBACK
ITERATION & IMPROVEMENT
INTRODUCING A NEW VARIABLE

I
A

TESTING THIS VARIABLE
LISTENING TO FEEDBACK
ITERATION & IMPROVEMENT
INTRODUCING A NEW VARIABLE

I
A

Feedback is the key to this whole process. The entire procedure revolves around having accurate and truthful feedback, and on you being able to digest and interpret it rationally and without emotion.

I
A

This is an endless cycle and is the only reliable way to improve

I
A

Simply put: to really modify this script, you're going to have to test a LOT of different variables

I
A

By variables, I mean everything - questions, tone, pitch, rebuttals, timing, silence, etc

I
A

NOTE: You can only test 1 variable at a time. If you test more than 1 variable and the outcome is different than it was before introducing the new variables, it's impossible to deduce which variable caused the change

I
A

So, I’m going to show you how to modify your script in this video, but it should be a never ending process

I
A

My conversion rate was stuck at 30% for about a year until I remembered this

I
A

The second you stop testing new things is the second you plateaux

I
A

And in business, the word plateaux is just another word for ‘slow death’

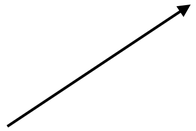

I
A

Let’s take a look at an example

ADDING A NEW PAIN INDUCING QUESTION

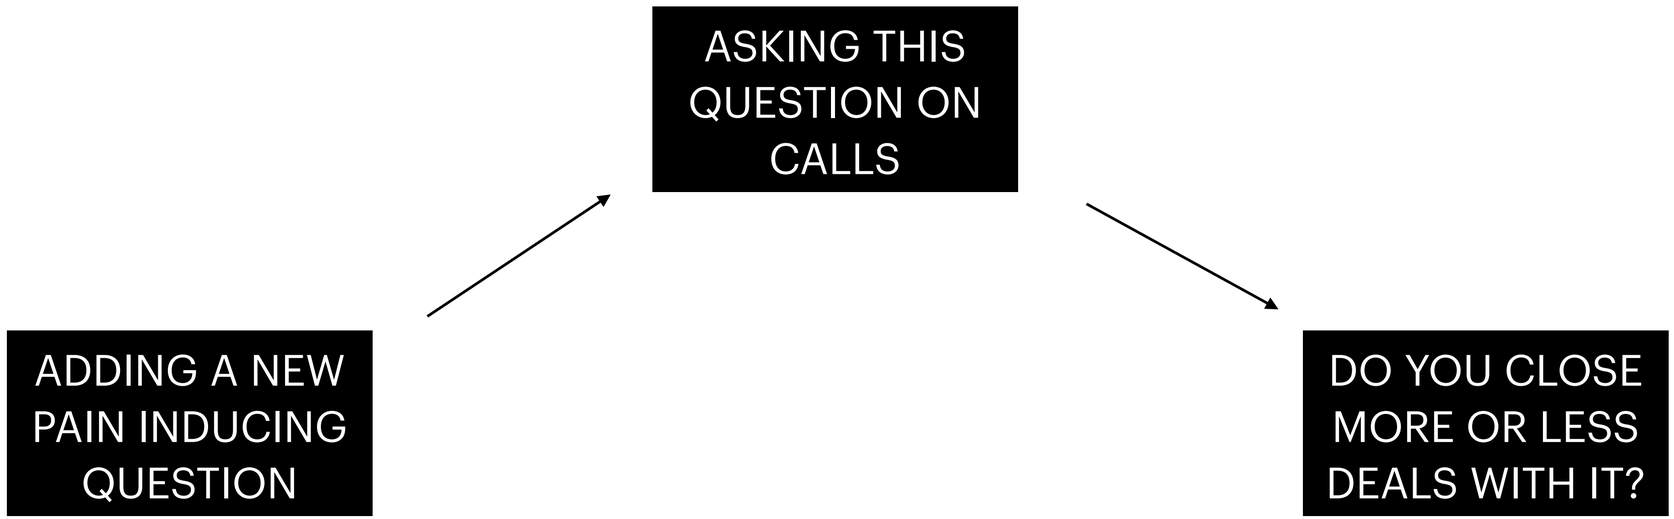

I
A

ASKING THIS QUESTION ON CALLS

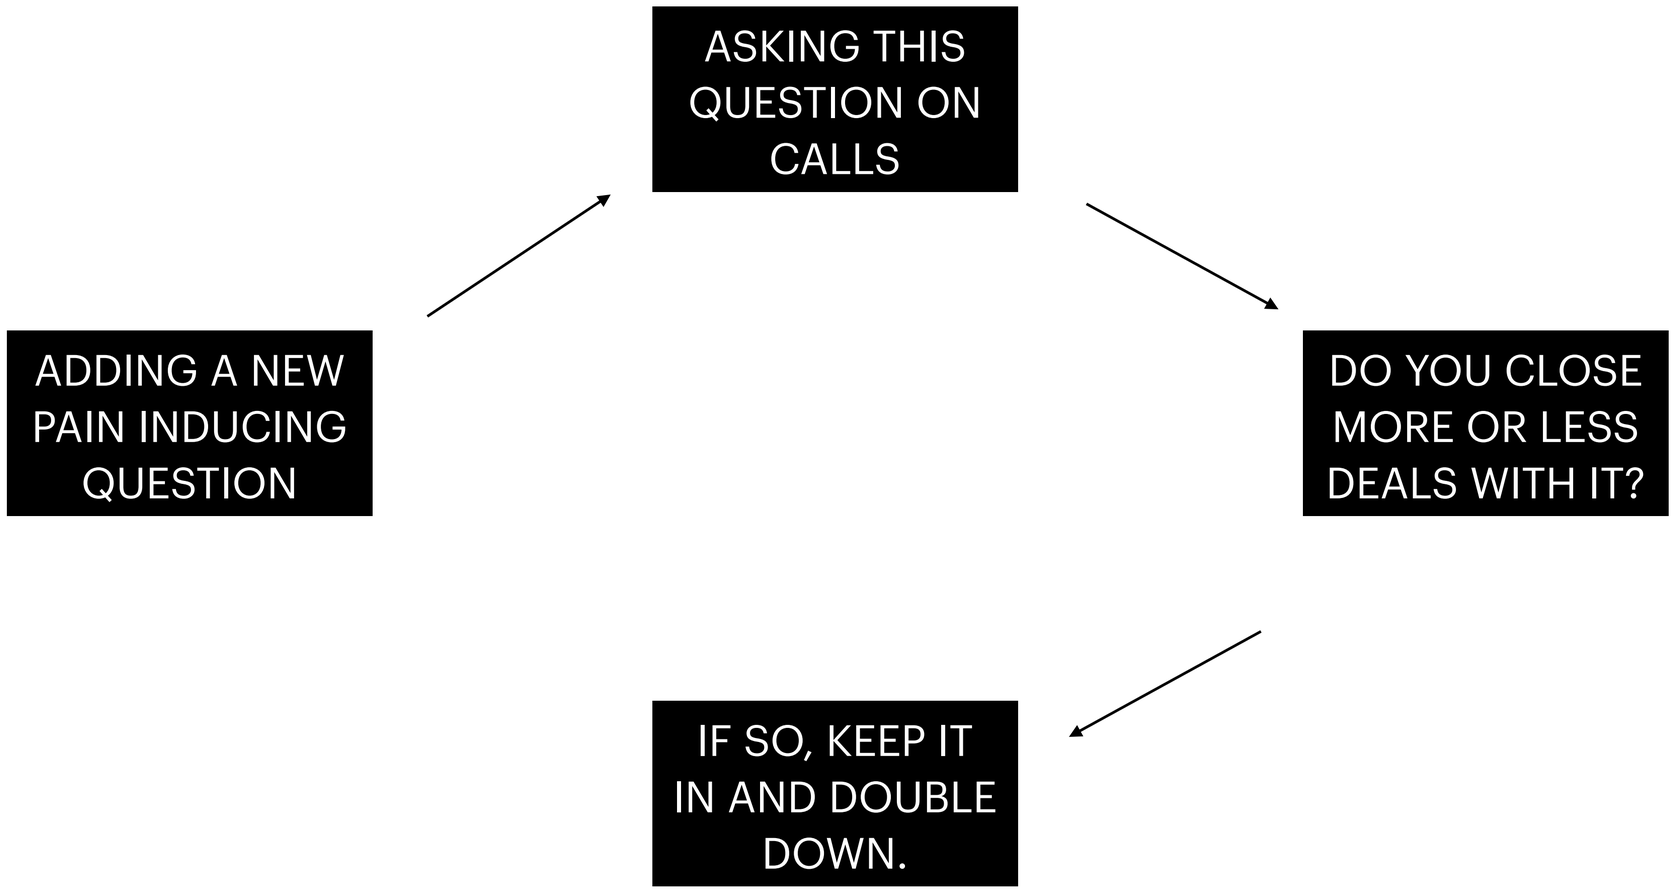

ADDING A NEW PAIN INDUCING QUESTION

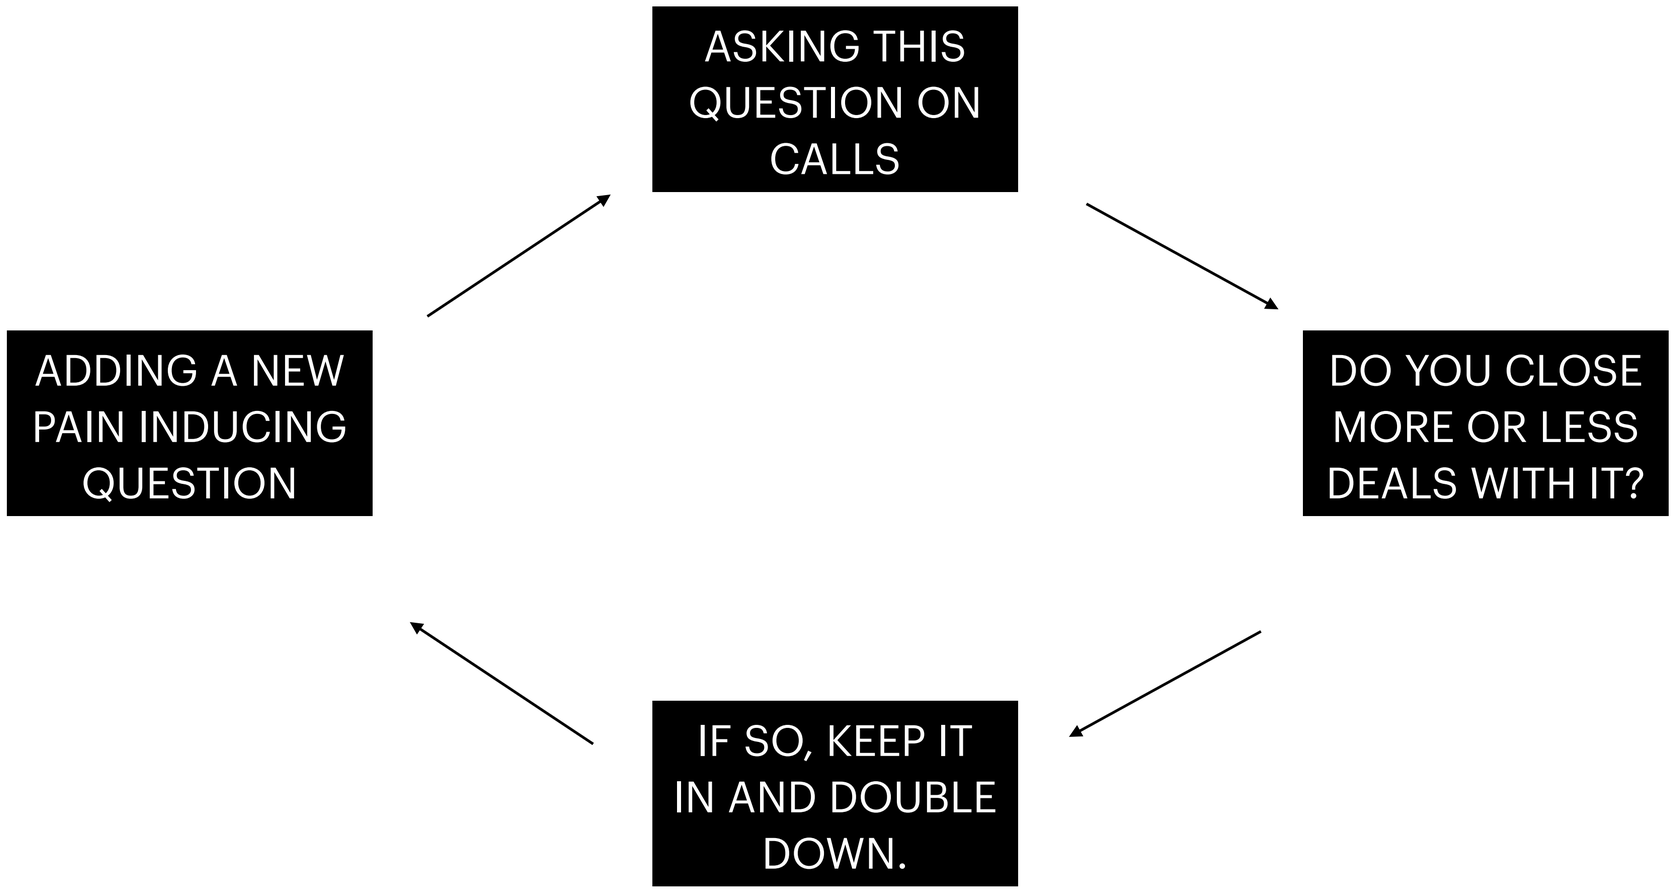

I
A

ADDING A NEW PAIN INDUCING QUESTION
ASKING THIS QUESTION ON CALLS
DO YOU CLOSE MORE OR LESS DEALS WITH IT?

I
A

ASKING THIS QUESTION ON CALLS
DO YOU CLOSE MORE OR LESS DEALS WITH IT?
IF SO, KEEP IT IN AND DOUBLE DOWN.
ADDING A NEW PAIN INDUCING QUESTION

I
A

ASKING THIS QUESTION ON CALLS
DO YOU CLOSE MORE OR LESS DEALS WITH IT?
IF SO, KEEP IT IN AND DOUBLE DOWN.
ADDING A NEW PAIN INDUCING QUESTION

I
A

Basically my point here is that once you modify your script, you cannot settle with it, you must constantly look to improve

I
A

The good news is that we've already done all the heavy lifting for you

I
A

You’re starting with a script that is the result of thousands of iterations and improvements

I
A

We've used this script for over 1000+ calls and we've refined it to the point where it reliably converts like a systemised machine

I
A

So you’re already ahead of 90% of other agency owners

I
A

But don’t get comfortable!

The key is this... test -> listen to feedback -> iterate and improve -> test again

I
A

This is why recording your calls and tracking your call data is vital

I
A

Recording Your Calls For Feedback

You must record every sales call you do

I
A

Your call recordings are going to be your greatest asset, as they provide us with feedback on what is and what isn't working

I
A

You want to listen back to every call and diagnose key pivotal moments in the call

I
A

Listen out for things you did right and things you did wrong, based on the prospects reaction and the direction of the call

I
A

When you find something the prospect seemed to like or resonate with, write it down

I
A

Here’s a basic framework for storing your calls

Your call recordings are like gold dust to your business, make sure you keep them safe & store them in Google drive

I
A

Modifying Your Script & The Two Step Modification Process

Let’s walk through the script quickly

Action items for modification

Action items for modification: Part 1

- Adjust / add script questions so that the script fits your niche and offer
- Craft out your expertise statement & perfect it so delivery is smooth and consistent
- Once you're happy with this, you have version 1.0 of your script and you're ready to start testing it
- Remember: the objective of your upcoming calls is to not only close clients, but to establish a proof of concept with your script.

I
A

Action items for modification: Part 2

- Now you're going to start making calls using this script. As you do, you want to record these calls and listen back to them for feedback to figure out where you are weak and where you are strong.

- After each call, fill out the 'Script Feedback Form' resource (available in the resources section).

- RULE: You must test your script against 30 calls before actually making a decision as to whether or not it is viable or needs to be changed. Averages show themselves over time and you cannot afford to make rash decisions without accurate data to support it. Stick with version 1.0 for at least 30 calls before you make any changes!!!
