Introduction

Welcome to Building Inbound Systems. Here we'll explore how to build simple, straightforward & consistent content creation & inbound marketing mechanisms that capture attention and convert it into cash via appointments. Inbound is a very powerful tool, but it can take a while before it starts to work. For this reason you should be prioritising outbound before inbound.

Inbound Value Exponents 🧲💰

As a system, inbound content has an exponential nature. This means outputs compound on themselves to become inputs as a positive feedback loop forms.

Value stacks as an exponent, meaning it achieves exponential growth (or decline) by nature.

We can imagine content has 'units of value' (UOV).

UOV is used to measure the contribution of value to your channel.

Important: Units of value are arbitrary, but illustrate the point of consistency.

For every video you make, your channel becomes exponentially more valuable to the market. The more valuable your channel becomes, the more subscribers, reach & appointments you'll get.

Content has value to the market when it contributes to the expansion and success of the market.

Content has value to platforms when they get people to click and stay. The more clicks and the longer the watch time, the more value the video/content is. Valuable content gets recommended.

Your first content will give your profile/channel a UOV of 0.000000001, new content multiplies this by 2x.

Video/content piece 1: Channel UOV of 0.000000001
Video/content piece 2: Channel UOV of 0.000000002
Video/content piece 3: Channel UOV of 0.000000004
Video/content piece 4: Channel UOV of 0.000000008
Video/content piece 5: Channel UOV of 0.000000016
Video/content piece 6: Channel UOV of 0.000000032
Video/content piece 7: Channel UOV of 0.000000064
Video/content piece 8: Channel UOV of 0.000000128
Video/content piece 9: Channel UOV of 0.000000256

Video/content piece 10: Channel UOV of 0.000000512
Video/content piece 11: Channel UOV of 0.000001024
Video/content piece 12: Channel UOV of 0.000002048
Video/content piece 13: Channel UOV of 0.000004096
Video/content piece 14: Channel UOV of 0.000008192
Video/content piece 15: Channel UOV of 0.000016384
Video/content piece 16: Channel UOV of 0.000032768
Video/content piece 17: Channel UOV of 0.000065536
Video/content piece 18: Channel UOV of 0.000131072
Video/content piece 19: Channel UOV of 0.000262144
Video/content piece 20: Channel UOV of 0.000524288
Video/content piece 21: Channel UOV of 0.001048576
Video/content piece 22: Channel UOV of 0.002097152
Video/content piece 23: Channel UOV of 0.004194304
Video/content piece 24: Channel UOV of 0.008388608
Video/content piece 25: Channel UOV of 0.016777216
Video/content piece 26: Channel UOV of 0.033554432
Video/content piece 27: Channel UOV of 0.067108864
Video/content piece 28: Channel UOV of 0.134217728
Video/content piece 29: Channel UOV of 0.268435456
Video/content piece 30: Channel UOV of 0.536870912
Video/content piece 31: Channel UOV of 1.073741824

^ 1+ is when results start flowing properly

This is a model to illustrate the compounding nature of consistency. It's not representative of the real world and 'UOV' doesn't really exist or work like this, but it makes sense to think of inbound this way.

Your value compound rate will depend on the quality of your videos/content, your competition, the algorithm, and the natural cap size of your market.

- If you miss an upload, your channel UOV goes down to what it was for the video before the last video.

This way, your channel UOV can exponentially DECREASE but with double the power it increases. (if you miss 6 pieces of content, your UOV goes down to what it was 12 pieces of content ago). This is why inconsistency costs you so much. One missed upload costs you the value from the two you uploaded prior to it.

This is the way social platform algorithms work. It rewards consistency by exponentially growing a channel, but punishes inconsistency by 2x'ing that exponential growth in decline.

Let's say you miss video 11, video 12 and video 13 for a week or two. Your UOV goes back down to 0.000000128, and you have to rebuild, taking time and ultimately taking longer to get to 1+ UOV where results happen.

This is also why people give up. They don't give their channel enough time to compound and reach a net UOV of 1+.

- If you upload an 'un-valuable' video (low CTR, low watch time, doesn't help the market), your channel UOV goes down to what it was before the last video. Your channel UOV can exponentially DECREASE by uploading shit content.

This is also why increasing your input volume of content exponentially grows your channel.

Once again, this is a model that doesn't truly represent reality. It's not exactly how these social platforms work, but it's a mental model that can be applied to explain the importance of consistency.

8 Components 🧱🧩

1. Scheduler: scheduling software with an event configured for someone to book a call.
2. Platform: the platform you post content on (YouTube, IG, X, etc).
3. Funnel: a sales dedicated web page that converts traffic into appointments.
4. Ideation System: a system for coming up with content ideas.
5. Creation System: a system for creating content from scripted material.
6. Storing System: a system for storing content and organising it.
7. Packaging System: a system for packaging content (relevant to YouTube).
8. Distribution System: a system for distributing content (uploading, scheduling etc).

Step By Step: Building Inbound Systems 🧱🔨

Step 1: Scheduler

1.1: Use these instructions to get set up: Step 1: Scheduler

^ for detailed video instructions please refer to 'building outbound systems'.

Step 2: Platform

2.1: Decide which platform you're going to create content on.

^ this should be based on where your niche is. For example, there's not much point in posting on LinkedIn if you're working with gym owners.

Note: I'd suggest building an inbound system for the major platforms your niche uses. For example, my niche is agency owners, coaches, consultants & high ticket B2B. So I use YouTube, X, Instagram + some LinkedIn etc.

All infringements will be prosecuted. If you are the personal owner of the Imperium Labs LTD End User Licence then you may use it for your own use but not for any other purpose.

2.2: Decide which platform is your Primary platform (the platform with highest leverage).
2.3: If necessary, decide which platform is your Secondary platform (second most leverage).
2.4: If necessary, decide which platform is your Tertiary platform (third most leverage).

For example - YouTube is my primary platform, Instagram is my secondary platform & X is my tertiary platform.

Step 3: Funnel

3.1: Use these instructions to build your inbound conversion funnel:
EasyFunnel Configuration (Academy)

To give you the next 5 steps, I've taken resources from EasyGrow. EasyGrow contains a ton of inbound systems, but I wanted to give you a taste of the level of detail we provide there to give you more of a window into it. They're specific to YouTube, but can be applied to any inbound system (whether it's X, LinkedIn post writing, Instagram reels, TikTok, etc).

If you want to apply for EasyGrow, you can do so below the video in the video description!

Step 4: Ideation System (YouTube Specific)

4.1: Ideation System (⅕)

Step 5: Creation System (YouTube Specific)

5.1: Creation System (2/5)

Step 6: Storing System (YouTube Specific)

6.1: Storing System (⅗)

Step 7: Packaging System (YouTube Specific)

7.1: Packaging System (⅘)

Step 8: Distribution System (YouTube Specific)

8.1: Distribution System (5/5)
